OBJECTIVE

Software Engineering Leader with over a decade of software platform, infrastructure, architecture, and leadership experience. Proven track record of establishing robust engineering standards, leading projects from idea through delivery and upkeep, aligning architectural strategy with business goals, and leading individual contributors.

EDUCATION

- **Milwaukee School of Engineering** Milwaukee, WI
Bachelor of Science in Software Engineering; GPA: 3.8 *Sep. 2013 – May. 2017*
- Eagle Scout; BSA

TECHNICAL SKILLS

- **Languages:** SQL, Ruby, Typescript, C#, Terraform, Python
- **Technologies:** PostgreSQL, ReactJS, Ruby on Rails, NodeJS, AWS

EXPERIENCE

- **Rite-Hite** Milwaukee, WI
Principal Software Engineer *Oct 2024 - Present*
 - **AI, IC Enablement:** Evaluate and apply LLM based AI to analyze data, optimize workflows, and communicate technical objectives.
 - **Technical Governance, Security:** Collaborate with platform leadership to establish automated secure controls for least privilege CI/CD pipelines, secret access, and data access.
 - **Platform Engineering:** Build out highly available, observable, and reliable IoT infrastructure using IaC (Terraform), Gitlab, and Google Cloud Platform for an IoT fleet of 17k loading docks.
 - **Leadership:** Lead technical implementation for team of 8 developers through numerous delivered projects with broad cross-functional scope.
 - **Team Building:** Build a culture of quality and operational excellence by establishing documentation practices (ADRs), knowledge sharing, and group collaboration expectations.
- **NodaFi LLC** (Remote) Milwaukee, WI
Software Contractor *Jul 2023 - Oct 2024*
 - **Rapid Delivery:** Prototype, build, and iterate on key features with tight deadlines to win customers and obtain Series A funding for a CMMS startup.
 - **Javascript, Node:** Build full stack features for a React-Native mobile app and a React web app backed by a GraphQL NestJS (NodeJS) web API.
 - **Performance Engineering:** Instrument DataDog telemetry and leverage MySQL experience to triage and improve site performance to rapidly scale a CMMS startup by 10x DAU.
- **Betterment, Inc** (Remote) New York, NY
Full Stack Engineer III *Jan 2022 - Jun 2023*
 - **Ruby on Rails:** Design and build Ruby on Rails REST APIs, collaborating with mobile development while planning for concurrent ReactJS and StimulusJS web consumers.
 - **Testing:** Ensure software behavioral correctness using Jest, RSpec, DBT test, and in-house open-source software testing solutions to prevent escaped defects.
 - **Leadership, Ruby on Rails:** Became a designated organization wide Ruby Platform Reviewer to provide guidance to peers and influence platform best practices and standards.
 - **Leadership, Data Engineering:** Mentor ICs in SQL query optimization, index tuning, data modeling, transactional safety, and negotiating project scope.
 - **Data Engineering:** Lead technical compliance reporting initiatives using Apache Airflow, dbt (ETL), AWS Redshift to provide required automated immutable integrity proofs to financial regulators.
 - **Data Integrity:** Detect, remediate, and prevent data integrity drift through automated pipelines, coordinated migrations, and strict process governance.

- **Secure Design:** Collaborate with architectural leadership, compliance, and product to lead design on secure, auditable, and defensible transfer flows between shared custody depository accounts.

- **GenoPalate, Inc** (Remote) Milwaukee, WI
Software Engineer (Senior / Lead) Sep 2020 - Jan 2022
 - **Javascript, Node:** Collaborate with a small team to estimate, scope, and build features for a React-Native mobile application and a React web frontend backed by an ExpressJS / Knex (NodeJS) web service.
 - **Integration:** Communicate with external vendors to design and implement DNA data integrations, automating all manual process from shipment to DNA sample processing and DNA sequence ingestion.
 - **Leadership:** Collaborate with team and lead effort to standardize testing, code review, deployment, and error monitoring (Sentry) to reduce escaped defect rate significantly.
 - **Cloud Infrastructure:** Propose, plan, and lead project to standardize all AWS infrastructure deployment and CI/CD through Github Actions, Terraform (IaC), and Docker to eliminate infrastructure deployment drift.
 - **Shopify Integration:** Build robust fault tolerant support for Shopify order integration in Node / Typescript on AWS (ECS, Lambda, SQS, S3) to ingest every customer purchase.
 - **Cloud Infrastructure / DevOps:** Plan and lead project to standardize all AWS infrastructure deployment and CI/CD through Github Actions, Terraform (IaC), and Docker to eliminate clickops deployment error.

Travel Break Jun 2020 - Aug 2020

- **Wantable** Milwaukee, WI
Senior Software Engineer Feb 2019 - May 2020
 - **React, Typescript:** Assist lead UX designer in building a Typescript, React, and SCSS design system to replace CSS style guide to create a coherent automatable UX.
 - **Leadership and Strategy:** Owned the end-to-end prototyping and iterative delivery of custom business-critical warehouse management system (WMS) features, in-house operations tooling, and e-commerce transactions using Ruby on Rails, Postgres, and Redis.
 - **Data Pipeline Optimization:** Engineered and tuned high-throughput PostgreSQL (Arel) export pipelines to external marketing channels, dramatically reducing database resource contention and slashing cloud compute overhead by \$2,000/month.
 - **Performance Optimization:** Utilized New Relic and Sentry telemetry to optimize queries, indexes, and other data layer bottlenecks to materially improve reliability and SEO ranking.
 - **Heroku:** Deploy and monitor a monolithic Rails application on Heroku.

- **Direct Supply, Inc** Milwaukee, WI
Software Engineer May 2017 - Feb 2019
 - **.NET Development:** Develop features and integrations for a catalog based food and equipment ecommerce solution in the eldercare industry using C#, Razor, Typescript, ReactJS, CoffeeScript, AngularJS.
 - **Domain Driven Development:** Demonstrate strong understanding of CAP theorem and distributed computing by designing and building fault tolerant integrations between disjointed lines of business and domains.
 - **Platform Automation:** Lead setup of automated infrastructure deployment to AWS ECS Fargate / AWS RDS (SQL Server) using Terraform, Hashicorp Vault, Bash, Docker, and Gitlab Pipelines.
 - **Terraform:** Pioneer IaC implementation (Terraform) and educate several teams of engineers how to deploy to multiply org efficiency.
 - **Event Driven Architecture:** Use AWS Lambda, PostgreSQL, RabbitMQ to connect distributed systems and automate services procurement.
 - **Mentorship:** Mentor intern and junior developers to increase team velocity and foster team strength.

- **Direct Supply, Inc** Milwaukee, WI
Software Engineer (Intern) Jan 2014 - May 2017
 - **RabbitMQ:** Integrate RabbitMQ event broker to satisfy user needs across lines of business.
 - **.NET Modernization:** Participate in an agile team (full time as of 2016) to modernize 100s of legacy jobs and distributed web systems to a modern .NET on AWS cloud based architecture.
 - **SQL:** Investigate and fix high I/O SQL deadlocking issues, with over 1000 transactions per second.
