OBJECTIVE

Senior data engineer with 10+ years of software platform, infrastructure, and architecture experience. Proven track record of establishing robust engineering standards, optimizing data resiliency and query performance, leading compliance and governance initiatives, building data platforms, automating data pipelines, leading ICs, and architecting data cross functionally around disparate business domains.

EDUCATION

- **Milwaukee School of Engineering** Milwaukee, WI
Bachelor of Science in Software Engineering; GPA: 3.8 *Sep. 2013 – May. 2017*
- Eagle Scout; BSA

TECHNICAL SKILLS

- **Database Technology:** PostgreSQL, MySQL / MariaDB, MS SQL / SSIS, AWS Redshift, Redis, Apache Airflow, dbt (Data Build Tool)
- **Languages:** SQL, Ruby, Python, Typescript, C#, Terraform, Bash, Elixir
- **Technologies:** RabbitMQ, AWS SQS, OpenTelemetry, GCP, GKE, AWS, CI/CD

EXPERIENCE

- **Rite-Hite** Milwaukee, WI
Principal Software Engineer *Oct 2024 - Present*
 - **Data Platform Engineering:** Leverage MySQL experience to optimize high-latency user reports, triage and preemptively mitigate outages, plan capacity, and reduce cloud costs.
 - **Data Governance, Leadership:** Mentor cross-functional engineers in advanced query optimization, data normalization, data integrity controls, SQL injection prevention, and index tuning to enable resiliency, integrity, and delivery velocity.
 - **AI, IC Enablement:** Evaluate and apply LLM based AI to optimize and troubleshoot query performance
 - **Data Enablement:** Led multiple initiatives to establish structured semantically annotated scalable data storage for future use of raw IoT data.
 - **Technical Governance, Security:** Collaborate with platform leadership to establish automated secure controls for least privileged CI/CD pipelines, secret access, and data access.
 - **Architectural Strategy:** Champion data excellence by pioneering architectural design documentation (ADRs) to establish practical single-source-of-truth expectations for data integrity, scalability, and availability.
- **NodaFi LLC** (Remote) Milwaukee, WI
Software Contractor *Jul 2023 - Oct 2024*
 - **Performance Engineering:** Instrument DataDog telemetry and leverage MySQL experience to triage and improve site performance to rapidly scale a CMMS startup by 10x DAU.
 - **Architectural Strategy:** Establish strategy and build a global user audit system to trace every user action through a central NoSQL data store.
 - **MySQL Migration:** Execute MySQL / MariaDB database major version upgrade to avoid ballooning licensure costs within minutes of downtime.
- **Betterment, Inc** (Remote) New York, NY
Full Stack Engineer III *Jan 2022 - Jun 2023*
 - **Data Engineering:** Lead technical compliance reporting initiatives using Apache Airflow, dbt (ETL), AWS Redshift to provide required automated immutable integrity proofs to financial regulators.
 - **Leadership:** Mentor other ICs on SQL query optimization, index tuning, data modeling, and negotiating project scope.
 - **Data Integrity:** Discover and correct data integrity drift through application code and by query. Participate in data migration initiatives from MySQL to Postgres.

- **Collaboration:** Collaborate cross functionally across teams between regulators, engineering disciplines, and product leaders projects within communicated estimates.
- **Secure Design:** Collaborate with architectural leadership, compliance, and product to lead design on secure, auditable, and defensible automated transfer flows.
- **Data Integration:** Use DataDog to monitor, report, and optimize integration fault tolerance and robustness improvements.
- **SQL:** Become the general authority on relational database optimization and data warehouse usage within my squad.
- **On Call Responsibility:** Participate in team and organization on-call processes, handling customer tickets and coordinating support for live production outages.

• **GenoPalate, Inc**

(Remote) Milwaukee, WI

Software Engineer (Lead)

Sep 2020 - Jan 2022

- **Data Integrity:** Discover and correct data integrity drift through application code and by query.
- **Integration:** Communicate with external vendors to design and implement DNA data integrations, automating all manual process from shipment to DNA sample processing and DNA sequence ingestion.
- **Leadership:** Collaborate with team and lead effort to standardize testing, code review, deployment, and error monitoring (Sentry) to reduce escaped defect rate significantly.
- **PostgreSQL:** Plan, coordinate, and execute project to upgrade AWS RDS PostgreSQL instance without any unplanned downtime.
- **Cloud Infrastructure:** Propose, plan, and lead project to standardize all AWS infrastructure deployment and CI/CD through Github Actions, Terraform (IaC), and Docker to eliminate infrastructure deployment drift.
- **Research:** Prototype and demo graph based (Neo4J) recipe generation solution using NLP.

Travel Break

Jun 2020 - Aug 2020

• **Wantable**

Milwaukee, WI

Senior Software Engineer

Feb 2019 - May 2020

- **Data Science:** Integrate rich Python / R data science models into dynamic React / Rails UIs to enable internal users to make more lucrative decisions.
- **Project Ownership:** Prototype and iteratively deliver full scale solutions using Rails, Redis, PostgreSQL and AngularJS for customers, a warehouse management system, and all other facets of an online clothing business.
- **Data Integration, Enablement:** Build and optimize Rails and PostgreSQL export jobs to marketing channels to reduce cloud compute costs by \$2,000/month and improve customer acquisition, churn, and lifetime value metrics.
- **Performance Monitoring:** Materially improve SEO and sales metrics by using New Relic and Sentry to improve database query performance.
- **Data Optimization:** Optimize personalized product recommendations, content delivery, and data science model integration using Redis.

• **Direct Supply, Inc**

Milwaukee, WI

Software Engineer

May 2017 - Feb 2019

- **Architectural Strategy:** Demonstrate strong understanding of CAP theorem and distributed computing by designing and building fault tolerant integrations between disjointed lines of business and domains.
- **Platform Automation:** Lead setup of automated infrastructure deployment to AWS ECS Fargate / AWS RDS (SQL Server) using Terraform, Hashicorp Vault, Bash, Docker, and Gitlab Pipelines.
- **SQL Expertise:** Triage, optimize, and resolve numerous query performance and data integrity issues in a complex collection of 30+ year legacy RDBMS systems (MS-SQL).
- **Migration:** Participate in migration of SQL Server instances from on-premises to AWS
- **Event Driven Architecture:** Use AWS Lambda, PostgreSQL, RabbitMQ to connect distributed systems and automate procurement services.
- **Mentorship:** Mentor intern and junior developers to increase team velocity and foster team strength.

• **Direct Supply, Inc**

Milwaukee, WI

Software Engineer (Intern)

Jan 2014 - May 2017

- **Architectural Strategy:** Use RabbitMQ to meet distributed data scaling needs through an event driven system.
- **Deployment:** Participate in modernizing change management to achieve compliance goals and reduce outages.
- **SQL:** Investigate and resolve high throughput advanced SQL deadlocking issues, with over 1000 transactions per second.
